

About us

Engineering company
AQUAWORLD

Industry

Ecology and water industry

Services

The introduction of modern methods of water purification, water circulation systems and wastewater treatment.
Design and installation of equipment for water purification and wastewater treatment.

Year of foundation

2009

Number of specialists

20

Number of companies

More than 200

Number of projects

More than 1000

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Our advantages

Strategic logistics

Convenient payment ways

Qualified and experienced specialists

High quality and reasonable price

Application of modern technologies

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Company profile

Plant facilities

Water pumping enterprises, thermal power stations

Container stations

Sanitation and protection of utilities

Domestic manufacture

Plant facilities, Water pumping enterprises, Thermal power stations

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Plant facilities

1. Water purification of surface sources for water pumping enterprises, thermal power stations, large industrial enterprises
2. Water Treatment Container Stations
3. Water treatment for steam and hot water boilers

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Water pumping enterprises, Thermal power stations

1. Designing of water treatment and wastewater treatment systems and facilities
2. Supply of water treatment and water purification equipment
3. Performing of the functions of a general contractor during the construction of water treatment and purification systems, during installation, installation supervision and commissioning works

For industries

Water treatment for boiler installation

Treated boiler feed water ensures:

Prevention of deposits on heat-conducting surfaces

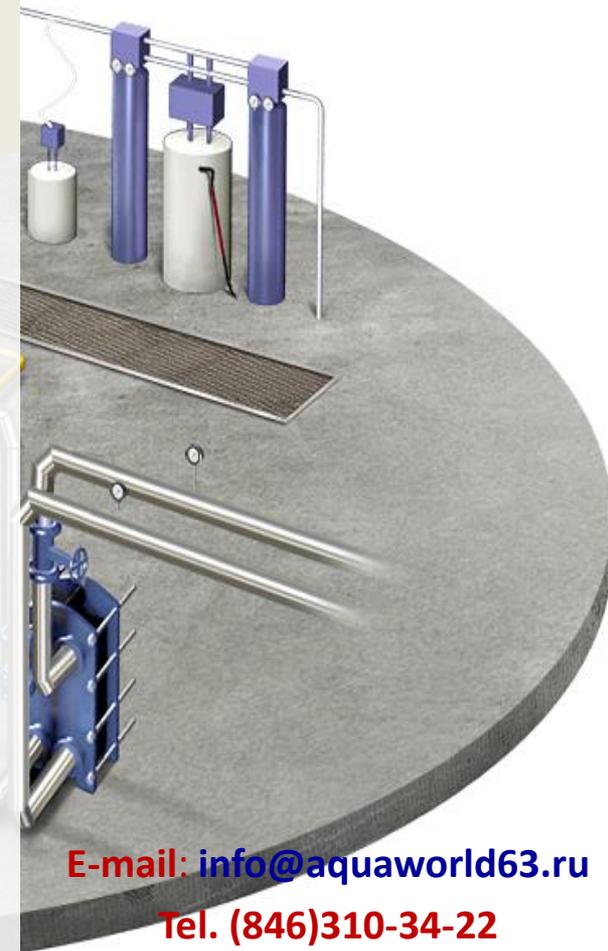

Energy saving, protection of materials from which the boiler is made from thermal overload and destruction

Corrosion prevention in the entire system, including condensate lines

Ensuring maximum operating availability, reducing repair costs

Ensuring of the trouble-free operation of the boiler and the quality of steam suitable for its use, with minimal losses due to the deposition of salts

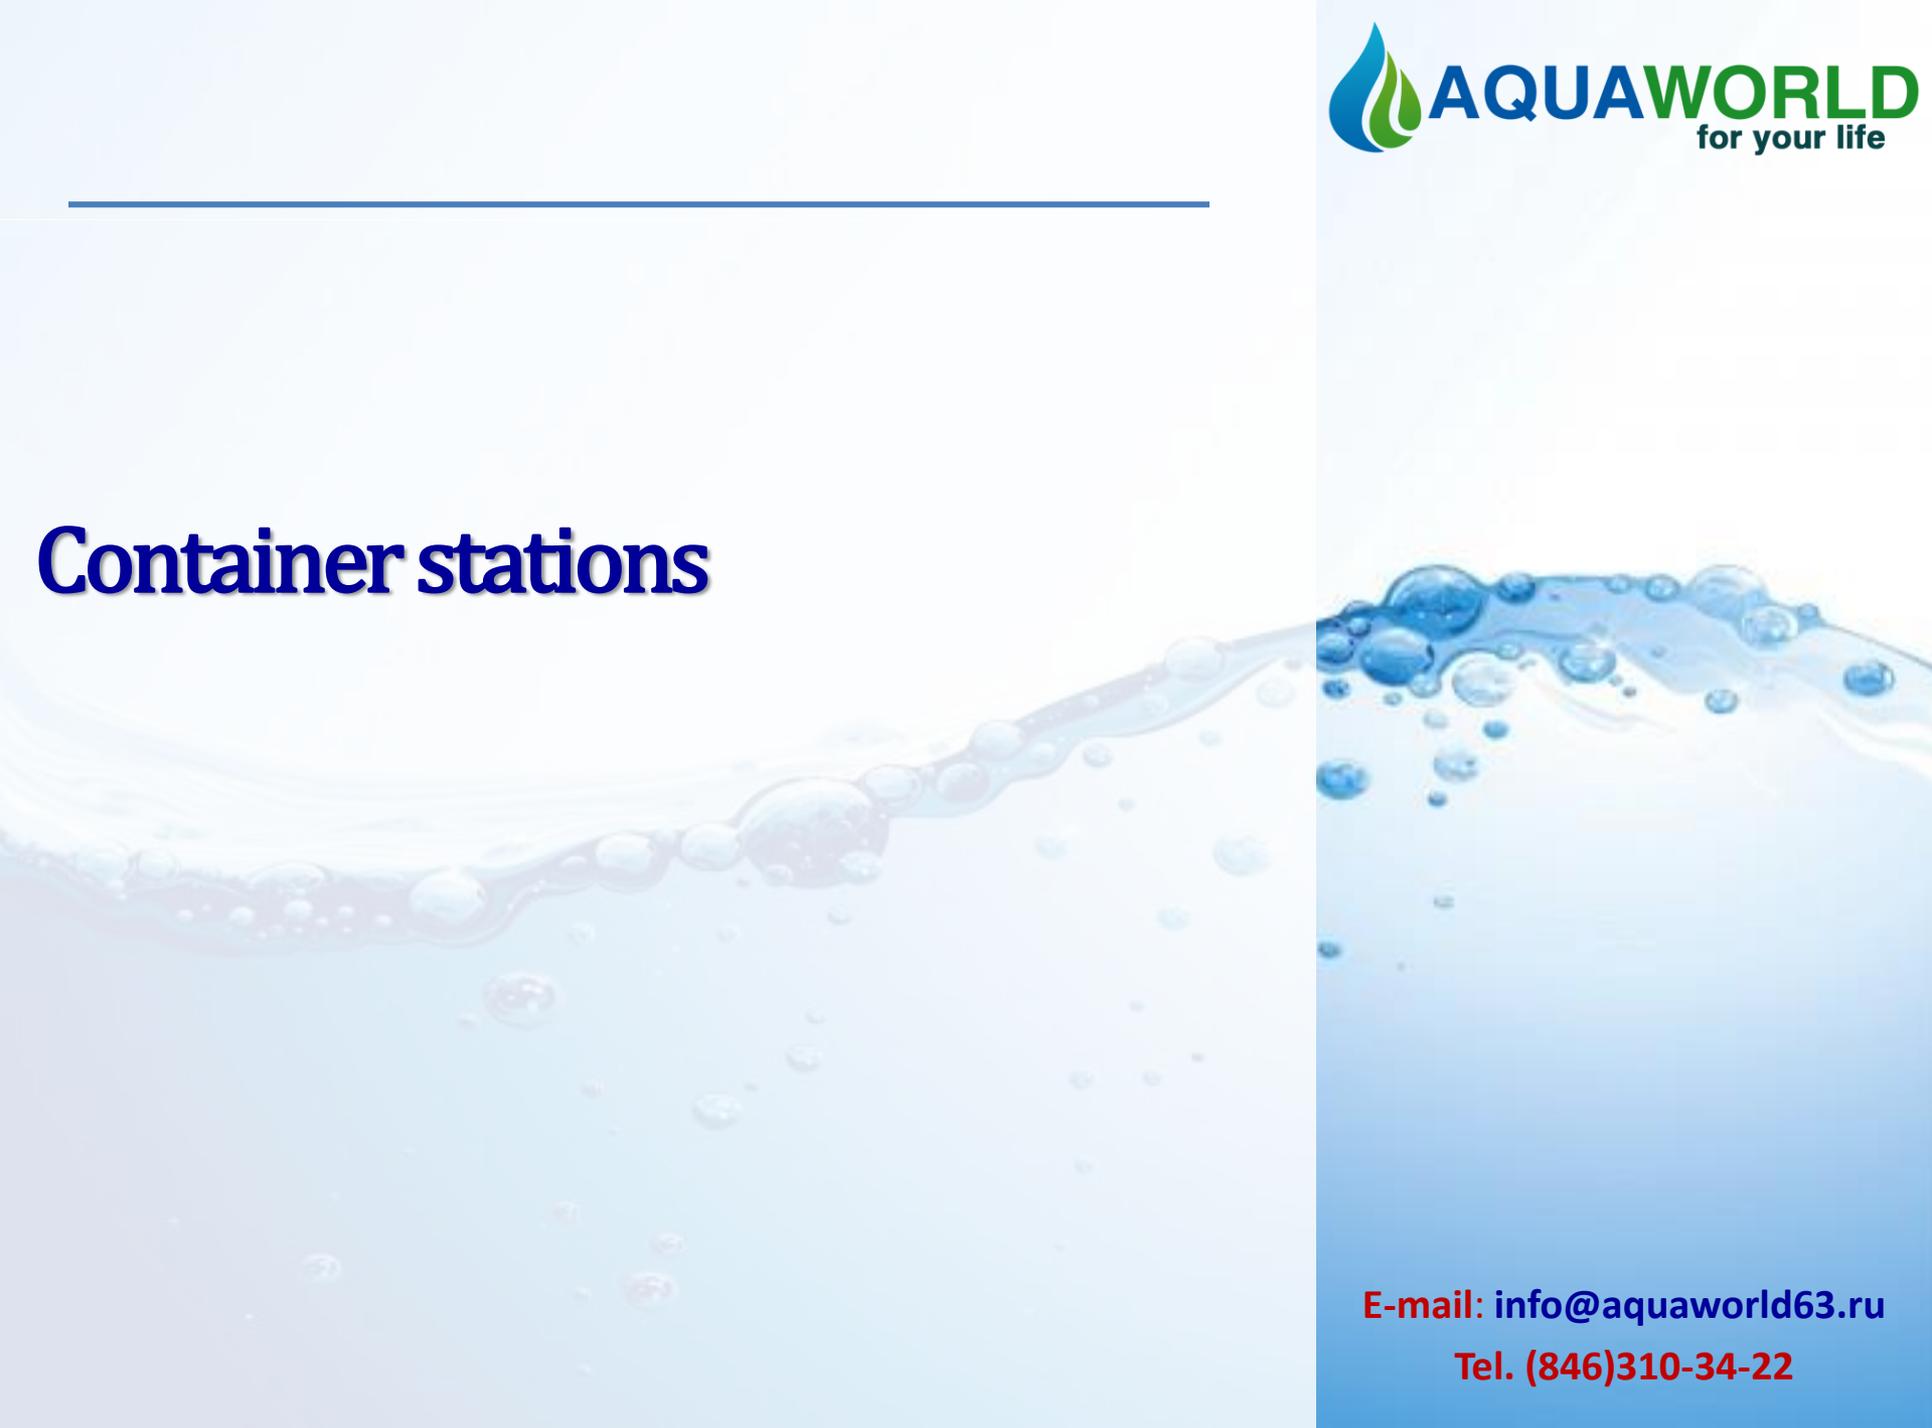

The highest possible efficiency of work

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Container stations

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Container stations

Field of application

- Housing and communal facilities - reconstruction or construction;
- Boiler and steam generator installations.
- Water utilities both urban and rural. Rotational and cottage villages.
- Enterprises of gas, oil, mining and smelting industry.
- Enterprises of food and pharmaceutical industry.
- Military units, outposts, bases and temporary bases; division of the Ministry of Emergency Situations, zone of natural disasters.
- Hotels, agricultural towns, resorts.

Advantages

Transportable
Compact
Anti-vandal

100%
operational
compatibility

Minimum
construction
work

Environmental
compliance

Without project
and passing
examination

Service life over
20 years

The possibility of
commissioning
new containers

The shortest
possible
commissioning
dates

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Options

Capacity

**From 1.0 – up to 250
m³/h**

Operation conditions

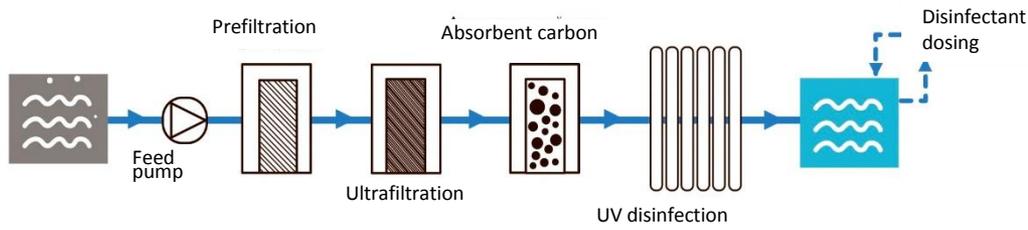

**From -55 °C up to +55
°C**

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Standard layout of modular water treatment systems

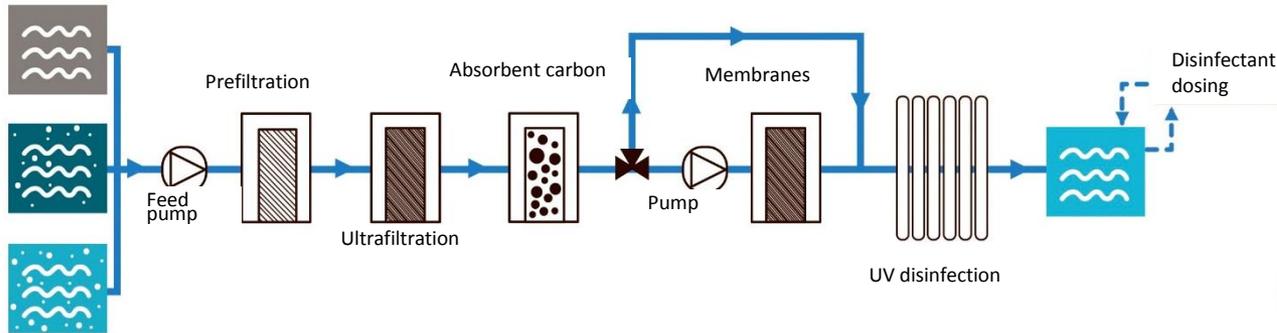

Fresh water

Container treatment facilities for the treatment of river water using ultrafiltration technology

Complete complex for any water

Desalination plants are produced for the treatment of saline and sea waters, using ultrafiltration and membrane technologies.

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

* The system can be supplemented with separate containers with a system of storage and distribution of clean water!

Sanitation and protection of utilities

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

Where water flows, there are deposits and sediments

90% of people believe that water flows through other pipes to their homes.

Causes of dirty drinking water:

- Old water pipes
- Unprotected cast iron and steel pipes
- Wear of coatings
- The structure of the water supply pipeline
- Water flow and operation conditions
- Water quality
- Service of water pipeline

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

TECHNOLOGY OF CLEANING AND DISINFECTION OF PIPELINE SYSTEMS

General description of work process:

- Water shut off
- Filling the system with reagent
- Maintain system fill level
- Discharge of reagent
- Flushing of system

Depending on the type of system being washed, its condition, configuration, etc., the most suitable engineering solution is selected.

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

TECHNOLOGY OF CLEANING AND DISINFECTION OF PIPELINE SYSTEMS

Advantages over pneumatic flushing:

- Removes biological deposits
- Facilitates general system flushing and disinfection
- Reduces total flushing time

Safety

- Permitted for use in drinking water systems
- Trouble-free disposal
- Plumbing is not exposed to any damage and dirt.

Tel. (846)310-34-22

Protection of engineering utilities and equipment against corrosion

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

TECHNOLOGY FOR PROTECTION OF SYSTEMS AGAINST CORROSION AND SEDIMENTS

Problems:

- Not all systems are correctly designed for required operational conditions and water quality.
- Water partially contributes to corrosion.
- Limited equipment service life
- Water properties stabilization required (pH, hardness)

Operation principle:

- Proportional dosing of a special **food grade** inhibitor based on silicates and phosphates to the water flow (about 15 g per 1 m³ of water)

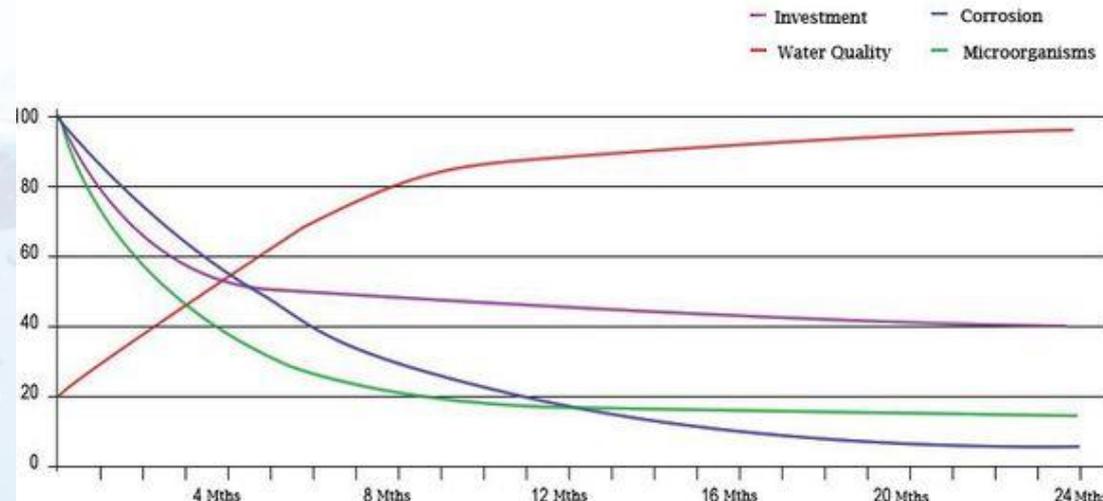

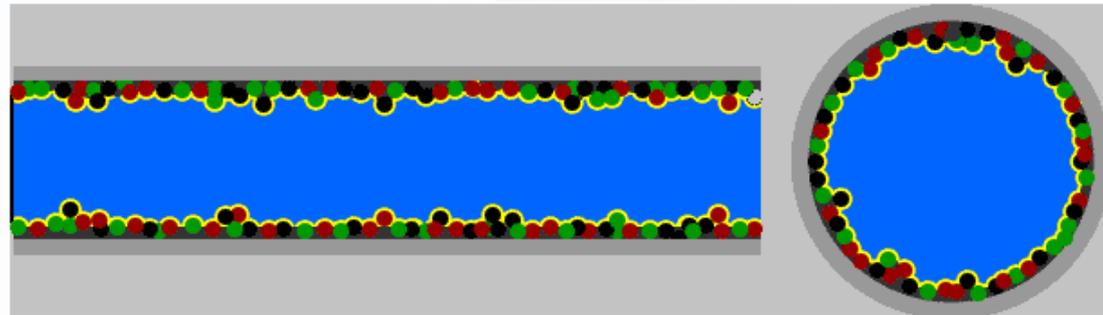

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

HOW IT WORKS CHEMICALLY

- The reagent forms a closed, waterproof layer over sediment and prevents further chemical reactions.
- An insulating "silicate" layer is formed in the system, chemically bound to the anode and deactivates it.
- The reagent stops the formation of corrosion and biofilm and thereby maintains the internal diameter of the pipes.

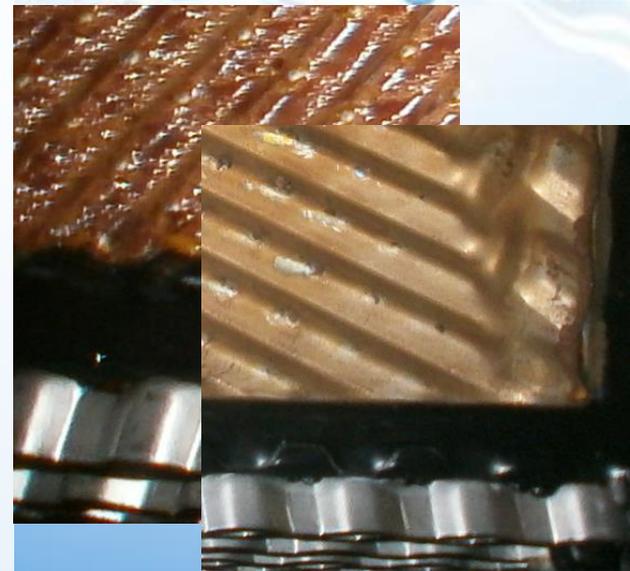

E-mail: info@aquaworld63.ru

Tel. (846)310-34-22

TECHNOLOGY FOR PROTECTION OF SYSTEMS AGAINST CORROSION AND SEDIMENTS

Advantages:

- a significant increase of the service life of pipelines and heating systems (boiler equipment, heat exchangers) without total overhaul;
- maintaining of hydraulic capacity for the entire period of operation;
- guarantee of maintenance of quality of the water delivered to the consumer;
- safety of use in cold water supply and hot water supply of drinking water, certified by the NSF, has certificates and permits for application in Russia.
