

OPTIZ-Monitoring Ltd.

**SAFETY MONITORING COMPLEXES OF
ENGINEER BUILDINGS, MECHANISMS
AND OBJECTS OF HIGH IMPORTANCE**

Yuri Nikitaev, CEO

Company

Innovative company OPTIZ-Monitoring Ltd. develops and produces fiber optic, tensometric and other types of and systems sensors to measure:

- deformation
- temperature
- pressure
- liquid level
- inclination
- acceleration
- other applications

It was founded in 2012 and located in the Science Park of Lomonosov Moscow State University (MGU).

The company team: graduates from the top Russian universities (MGU, MEPhI, Bauman MSTU).

Project products

- Aim – fundament and construction monitoring for providing technical security for dwelling and industry buildings
- Optic fiber systems: modern technologies, antijamming devices, easy for using in variable conditions, long life, sensitive and accurate.

Project products

Deformation sensor DP-1

Purpose: deformation measurement in metallic constructions

Basic specification:

Sensor cavity	100 -130 mm
Range of relative deformations	up to 0,5%
Measurement accuracy	5% of full scale

Deformation sensor DP-2

Purpose: deformation measurement in concrete and brick constructions.

Basic specification:

Sensor cavity	100 -130 mm
Range of relative deformations	up to 0,5%
Measurement accuracy	1% of full scale

Temperature sensor, industrial

Purpose: industrial processes control

Basic specification:

Sensor dimensions	350 mm x 140 mm
Operation range	-40 ÷ + 85° C (up to 200° C)
Measurement accuracy	0.1° C

Project products

One-axis inclinometr IN120

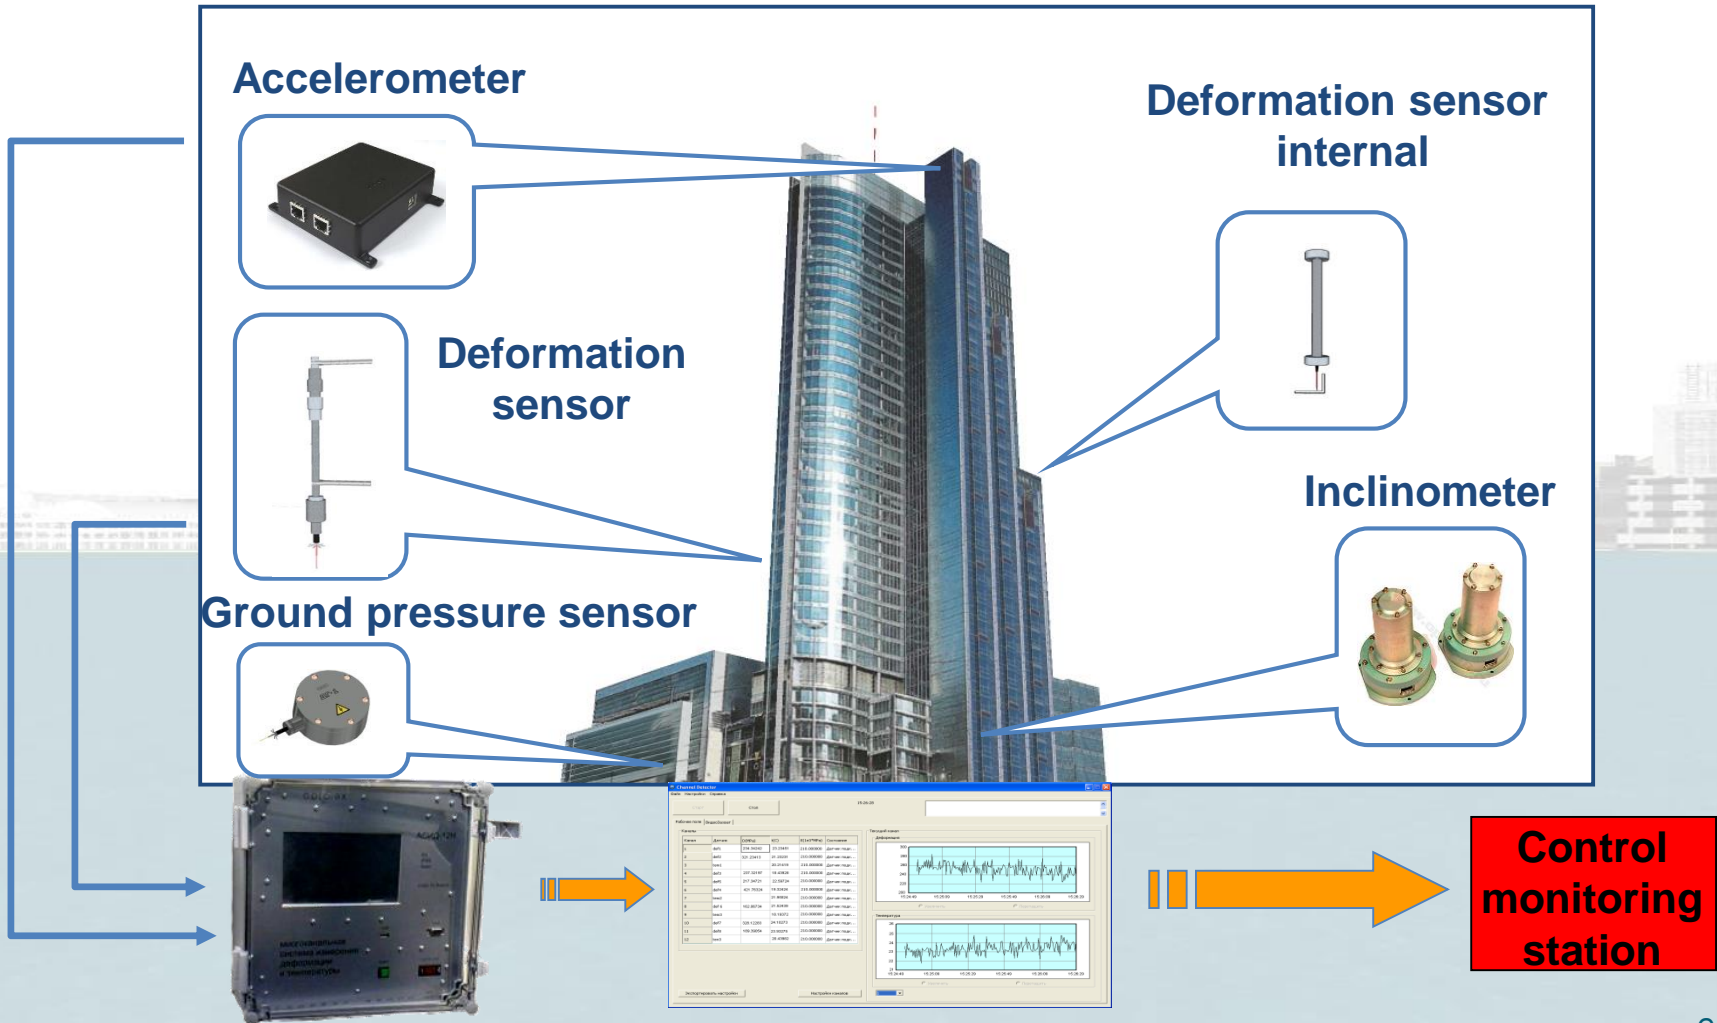

Purpose: high-stable measurement and control of small tilt angles (a deviation from a vertical axis) of various elements of engineering and construction designs – overlappings, columns, wells, support columns, walls, the bearing beams, etc.

Basic specification:

Measurement range:	$\pm 7\,200$ angular seconds
Measurement accuracy:	2.0 % (at range of $\pm 7\,200$ angular seconds), 1.0 % (at range of ± 360 angular seconds)
Standard value of the main error:	1.0 % (at range of $\pm 7\,200$ angular seconds), 0.2 % (at range of ± 360 angular seconds)
Drift of zero level:	1,5 angular seconds (at range of ± 360 angular seconds)
Additional temperature error:	1,5 angular seconds/ $^{\circ}\text{C}$ (at range of ± 360 angular seconds)
Temperature drift of zero:	
at range of ± 360 angular seconds:	2,0 angular seconds/ $^{\circ}\text{C}$
at range of $+5\dots+30^{\circ}\text{C}$:	2,0 angular seconds/ $^{\circ}\text{C}$
Temperature measurement error:	1,5% ($-25\dots+50^{\circ}\text{C}$) 2,0% ($-40\dots+50^{\circ}\text{C}$)

Security monitoring

System of vibromonitoring and perimeter protection

Security systems for perimeters and extended objects, system of monitoring of conditions of buildings.

Mission: Monitoring of vibration effects on a fiber-optical cable.

Main characteristics:

Total length is up to 100 km.

Localization of a place with an accuracy of 5-10 m.

Sensitivity interferential

Processing neuroanalysis

Скриншот программного интерфейса системы мониторинга. Включает панель настроек, таблицу журналов и панель просмотра.

Основные настройки

- COM3 (выпадающий список)
- Сторн (кнопка)
- 8 (поле ввода)
- Аппаратное усреднение (выпадающий список)

Настройки срабатывания тревоги

- 1 (выпадающий список)
- Частота: 40 (поле ввода)
- Порог (выпадающий список)
- 10 (выпадающий список)
- Время анализ: 7 (поле ввода)
- Усреднение (выпадающий список)
- 18 (выпадающий список)
- Начало (м): 205 (поле ввода)
- Конец (м) (выпадающий список)

Запись журнала

- События
- RAW сигнал
- Метка времени

Режим просмотра

- Срез
- График

Номер кадра = 1389 Разрешить звуковой сигнал test

Saint-Petersburg

Areas of application

Basic industry, plants, factories.

- Tensions and deformations of different buildings
- Ground pressure
- Incliniometry of engineer buildings
- Tensions in reactor reinforced concrete decks and composite concrete decks
- Parasite vibrations in building constructions
- Construction integrity
- Radiation
- Contruaction temperature

Areas of application

Power generation facilities, hydropower, nuclear power

- Intense and deformation control of integrity of buildings, dams, nuclear reactors, electric bearing parts and towers
- Inclino-metric control of vertical position of basic elements
- Vibration control dangerous vibration effects
- Temperature control power units
- Control of integrity of reactors
- Monitoring of pressure upon a soil
- The distributed vibration control of territory perimeters

Areas of application

Oil processing, machine-production, chemical companies

- Intense and deformation condition of buildings
- Inclinomeric control of bearing walls and blankings
- Accelerometric and vibration control of workshops with the increased vibration influences
- The intense and deformation control, the pointed and quasidistributed vibration control of separate units and gears of machines
- The distributed protection control perimeter of buildings and territory enterprises
- Temperature control

Areas of application

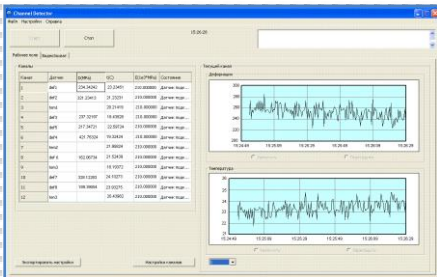

Oil storages, storages of dangerous wastes or chemicals

- Intense and deformation control of integrity of storage tanks.
- Inclinomeric control of vertical position of basic elements and storage tanks
- Temperature control
- Control of liquid pressure in storage tanks
- Monitoring of pressure upon a soil
- The distributed vibration control of territory perimeters

Key parameters

- resolution up to 10^{-6} (of full scale)
- number of channels over 12
- length of optical fiber cable up to 100 km (for distributed monitoring)
- dimensions 300 mm x 300 mm x 130 mm
- weight max 3 kg (for mobile systems)
- power consumption max 12 W
- battery life max 1 month
- degree of protection IP-65
- communication protocols Ethernet (Wi-Fi)
- sensor types deformation sensor, temperature sensor, pressure sensor, inclination sensor, level sensor, acceleration sensor, so on!

Software allows interrogating all channels simultaneously, processing data, storing it and sending via Internet including wireless LAN.

Key advantages

- **All types of buildings safety technical monitoring**
- **All configuration types – from periodical to permanent 24 hours monitoring**
- **Multichannel system architecture**
- **Innovative conception of integration**
- **Unique accuracy and reliability according to innovative hardware and software**
- **The best correlation of price and quality versus world leaders**
- **Fire and explosion safety**
- **Immunity to electromagnetic interference**
- **Immunity to chemical damage and radiation**
- **Possibility of remote sensing**

Main idea

DIFFERENT

TYPES

OF

MONITORING

ONE SYSTEM
TO MONITORE
EVERYTHING

Technical model

We produce both original hardware and software, sensors, monitoring systems and complexes.

We integrate our monitoring systems into buildings and make monitoring measurements and calculations.

We plan to integrate all our sensors and products in one monitoring complex with universal software interface.

Business model

We are eager to work together with project and exploitative companies. Also we are open to make partnership with integrators and industrial companies or funds.

We can cell licenses or can be distributors ourselves.

We plan to develop our company and to work at international security market. Therefore we are looking for some strategic investors.
