

# «Creation of a separate enterprise for production of medical purpose ceramic products»

Innovative Company NEVZ-CERAMICS JSC 2017

## **About Company**

**NEVZ-CERAMICS JSC** was founded in 2011 by NEVZ-Soyuz Holding Company together with ROSNANO State Company for implementation of an innovative project: **«Creation of an industrial production of nanostructured ceramic products».** 

Under the scope of the project, the Company develops and produces nanostructured ceramic products for industrial consumers in power industry (including nuclear power), radio electronics, mechanical engineering, chemical and petrochemical industry, medical purpose ceramic products.

ELECTRONICS AND ELECTRICAL ENGINEERING

PROTECTION FOR MINING EQUIPMENT

PETROLEUM AND CHEMICAL INDUSTRY

CERAMIC PRODUCTS FOR MEDICAL INDUSTRY

## **Principal Production Lines of the Project**

1. Bioceramics for traumatology, orthopedics and dentology

2. Ceramics for vehicle and equipment protection

3. Ceramic substrates and insulators for electronics, electrical engineering and power production. Ceramic elements for isolation valves

# **Products of the Project**

Implant for hip joint with ceramic components

Ceramic head for hip implant

**Ceramic disc for dental restorations** 

#### **Hip Implant with Ceramic Components**

Hip implant is designed for cementless endoprosthesis replacement of pathologically changed human joint and it assists in recovery of locomotive function.

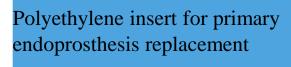

#### **Set Contents**

Ceramic head is made of unique extra-strong ceramic composite material Al2O3-ZrO2 properties of which meet the requirements of ISO 6474-2-2012 International Standard.

Stem with a textured surface for primary endoprosthesis replacement is made of BT6C, BT6, BT20.1 titanium alloy.

Press fit cup with cementless fixation made of BT1 grade titanium.

Company supplied implants to 12 clinics in Russia since June 2015 to December 2017. More than 3 500 surgeries were executed.

00 surgeries were executed.

**Title Partner** 

« Novosibirsk Traumatology and Orthopedics Research Institute named after Ya.L. Tsyvyan»

## **Ceramic head for hip implant**

Ceramic head is made of extra-strong alumina-zirconium ceramics from nanosized and submicron components and meets ISO 6474-2 International Standard

#### **Ceramic head:**

- ✓ bioinert
- ✓ biocompatible
- ✓ wear-resistant
- √ hypoallergenic

Ceramic head combines with stems and cups from different manufacturers

#### Range of produced ceramic heads

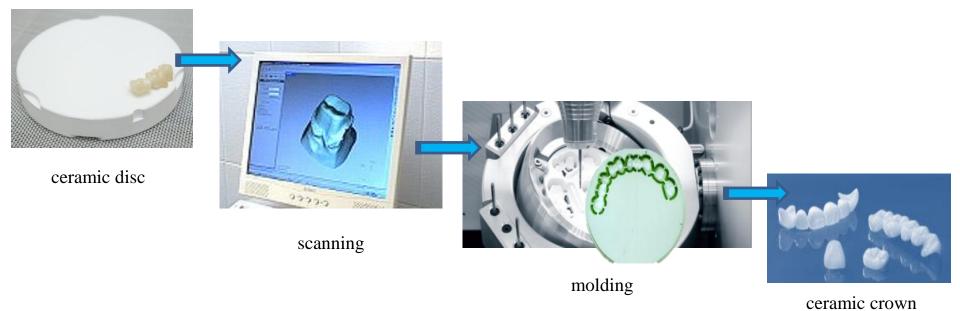

Head diameter, mm	Neck length
28	S, M, L
32	S, M, L

#### Ceramic blanks made of zirconium dioxide for dental restorations

NEVZ-CERAMICS, JSC was among the first companies in Russia who started production of dental products made of zirconium dioxide

#### **BICER Dent zirconium ceramics:**

- ✓ High-technology ceramic material designed for durable restorations of dental prostheses;
- ✓ Satisfy the highest requirements to aesthetics;
- ✓ Excellent biocompatibility.

## **Market for the Project Products**

#### Global trends in use of ceramics for endoprosthesis replacement

Currently, more than 2 million hip joint surgeries per year are executed worldwide and 1.5 million of which are executed using ceramic components

#### More than 50%

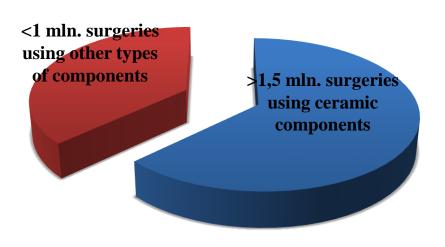

of surgeries are executed using ceramic components

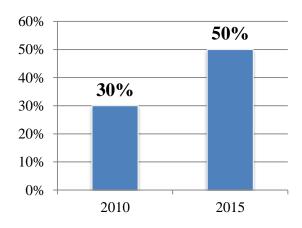

- Germany, France, Italy
- USA, Brazil, Australia
- Japan, Korea, China

#### **10%**

of surgeries are executed using ceramic components

• Russia

Ceramics application percentage in hip joint implants worldwide

#### **Potential Consumers of Ceramic Heads**

#### 1. Zimmer Biomet (USA)

World leader in the field of development and production of products for traumatology and orthopedics. Company works in more than 24 countries all over the world and sells products in more than 100 countries.

Company produces more than 30 models of modern high-tech hip implants.

Sales volume in 2015 was 6,0 billion USD, including knee joint implants - 2,27 bln. USD, hip joint implants - 1,5 bln. USD.

#### **Potential Consumers of Ceramic Heads**

## 2. Stryker (USA)

Stryker Corp. is the world leader on orthopedics product market and one of the biggest manufacturers of medical equipment. Company produces and supplies joint implants, implants for osteosynthesis; for surgical treatment of damages, inherent defects and deformities of spine; microimplant systems, orthobiological products, electromechanical navigational surgical instruments, surgical instruments, endoscopic products and products for patient care and emergency care equipment. Net sales for 2015 was 9,9 bln. USD.

#### **Potential Consumers of Ceramic Heads**

## 3. B. Braun Aesculap (Germany)

Company is one of four principal subdivisions of B.Braun Company – one of the leaders among leading global suppliers of medical equipment and services.

Company produces a wide spectrum of products: surgical instruments for open and minimal invasive access, implants for orthopedics, neurosurgery, spinal surgery, suture material, container systems, surgical instrument storage systems, surgical motive and navigational systems, products for interventional cardiology.

#### **Potential Consumers of Ceramic Heads**

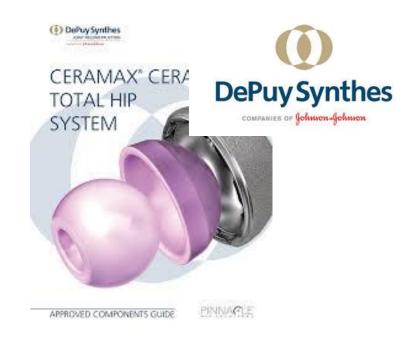

#### 4. Smith&Nephew (Great Britain)

One of the biggest suppliers of medical equipment and materials, also known for its innovative developments in the field of orthopedics and endoscopy. All implants are made of their own patented materials using advanced technologies and software developed by the Company.

## 5. DePuy Sinthes (Johnson & Johnson subdivision) (USA)

The biggest manufacturer of innovative package solutions in the field of traumatology, orthopedics and neurosurgery. Subdivision offers high-tech medical products and reliable surgical techniques for big and small joint endoprosthesis replacement, fracture treatment, spinal surgery, sport medicine, neurosurgery and maxillofacial surgery.

#### **Results of Design and Technology Works**

In close cooperation with "Novosibirsk Traumatology and Orthopedics Research Institute named after Ya.L. Tsyvyan", Siberian division institutes of the Russian Academy of Science, leading universities and medical treatment facilities of Russia with the participation of German experts in the field of development of ceramic products for medicine, a range of research and development works was conducted.

- ✓ Nanostructured high-density ceramic composition and ceramic product manufacturing technology for medicine were developed.
- ✓ Requirements and process regulations were developed for preparation of ceramic mass with average particle size smaller than 1 micron.
- ✓ Set of technology documentation (route chart, process chart, control chart, production process statistical control chart) for extra-strong ceramic material production was developed.
- ✓ Set of design documentation for hip implant was developed.

# Characteristics of hip implant ceramic components vs. world analogues

Characteristics	Ceram Tec (world leader)	NEVZ-CERAMICS
Density, g/cm <sup>3</sup>	4,37	4,37
Ultimate bending strength, MPa	1350	1400
Crack resistance, MPa*m <sup>-1/2</sup>	9	6
Young's modulus, HPa	350	350
Grain size, micron	less than 1,0	less than 1,0
Bearings wear rate, micron/year	0,015	0,015

Hip implant ceramic components meet all requirements for profound ceramic components.

#### **Tests**

✓ Toxicity tests for ceramic composition material according to ISO 10993 were conducted which confirmed non-toxicity of developed composition.

Ceramic components of hip implant made of alumina-zirconium ceramics are non-toxic, sterile, non-pyrogenic, hemolytically neutral, do not cause skin irritation.

#### **Tests**

✓ Hip implant technical tests were conducted (inspection of safety and technical characteristics).

Hip implant meets the requirements of regulatory, technical and operation documentation

3.2 Выс вчасняя в соответствно с номенежнуумой классифинацией медиципсовк изменен 500 сго 30.

✓ Operation tests and dead-weight load tests were conducted for ceramic components.

Hip implant ceramic bearings have passed simulation wear tests for 20 years of operation

Hip implant ceramic bearings have passed dead-weight load tests according to ISO 7206-10 more than 2 tons

#### **Patents**

✓ Notification dd. 20.01.2017 on "Ceramic material and method for its production" invention patent issue was received (pink ceramics with improved properties).

Notification about willingness to grant a patent

✓ Application to PCT (Contract on Patent Cooperation) for acquisition of a patent on ceramic component invention for hip implant was made.

#### ✓ Certificates of Validation for medical products were received

Certificate of Validation for hip implant

Certificate of Validation for hip implant ceramic bearings

✓ Certificates of Validation for medical products were received

Certificate of Validation for ceramic disc for dentistry

# **Assets/Major Equipment**

**Bead mill** 

**Bead mill** 

**Gasostatic press** 

**Turning lathe** 

**Spray-dryer** 

**Isostatic press** 

Grinding and polishing center

#### **Assets / Instrumentations**

**Tensile testing machine** 

**Scanning electron microscope** 

Sequential X-ray fluorescent spectrometer

Hydraulic impact strength test unit

**UV-control unit** 

**Profilometer**
