Description of the Products. Ballistic Ceramics

Ballistic ceramics – primary material for production of ceramic composite protection panels for land, marine and air vehicles and means of armor protection for manpower

* Ceramic composite protection panels based on ballistic ceramics -

provide protection against ammunition with a caliber of 7,62mm, 12,7mm, 14,5mm and artillery splinters FSP 20 mm according to Russian and foreign standards (GOST R 50963-96 and STANAG 4569)

List of utilized ballistic ceramic items

Ballistic ceramics made of alumina oxide

Nº	List of items	Drawing
1	Cylinders d = 13,4 mm, h = 8–14 mm	
2	Cylinders d = 29 mm, h = 11–24 mm	
3	Hex 20*23 mm, h = 4÷20 mm	
4	Hex 40*46 mm, h=4÷20 mm	
5	Radial plate 50*50 mm R = 410 mm, h = 8-12 mm	
6	Flat plate 50*50 mm, h = 4-12 mm	

Ballistic ceramics made of boron carbide

Nº	List of items	Drawing	
1	Hex 20*23 mm, h = 4÷16 mm	Ē	
2	Hex 40*46 mm, h=4÷16 mm	†··†··† f-·∔-}#	
3	Flat plate 50*50 mm flat, h = 4-16 mm		

Our expertise

- □ Series of scientific researches and development efforts were conducted with the following results:
- Ballistic ceramics made of alumina oxide and boron carbide was obtained, technical characteristics of which exceed world analogues;
- Armor structures based on cylinder and flat ceramic elements were developed for vehicles and individual protective means

□ Set of technological documentation (route charts, process charts, control charts, statistical quality control techniques charts) was developed for series production of ballistic ceramics and products made of it.

Our expertise: International Ceramics Quality Level

Characteristics of NEVZ-CERAMICS Company ceramics in comparison with world analogues

Results of integrated survey of alumina oxide ceramics								
Indicator	Unit of measurement	NEVZ-CERAMICS JSC (Russia)	Rival 1 (Germany)	Rival 2 (USA)	Comparative worldwide evaluation			
Unique elemental composition	Base $(Al_2O_3 \text{ content})$	≥ 98,5%	≥98,5%	≥98,5%	In accordance with global indicators			
Apparent density	g/cm ³	3,8	3,8	3,8	In accordance with global indicators			
Elastic modulus	HPa	350	>300	350	In accordance with global indicators			
Vickers microhardness	HPa	17,9	17,6	13,7	Higher than global level			
Crack resistance	$MPa \cdot m^{1/2}$	5,9	4,6	n/a	Higher than global level			
Bending strength	MPa	375	375	375	In accordance with global indicators			
Sound velocity	m/s	12 000	10 508	n/a	Higher than global level			

Our expertise: Results of conducted ballistic tests

Ceramics produced by NEVZ-Ceramics JSC have passed several tests and confirmed ballistic properties as a part of ceramic composite armor elements with 3, 5, 5a, 6 protection classes of the leading domestic armor gear manufacturers («KIRASA», «CLASS» Research and Production Enterprise, «ARMOCOM-Center» Research and Production Enterprise, «Techincom», «Specmaterialov» Research and Production Enterprise), and also in the main certified test centers (3rd Central Scientific-Research Institute of the Ministry of Defence of the Russian Federation, Research Institute of "NII Stali" JSC, OCSiK GU "STiS" Research and Production Enterprise of the Ministry of Internal Affairs of Russia, "CNIITOCHMASH" Federal State Unitary Enterprise).

Our expertise: Results of conducted ballistic tests

Obtained a certificate in the leading center IABG (Ministry of Defense of Germany) on conformance of armor structures to the requirements of NATO STANAG 4569 Level 3 and Level 4 Standards.
Armor panels for body armor have succesfully passed evaluation trials in DuPont Laboratory (Switzerland)

Our expertise. Development of 100% quality control management system for geometry and appearance of flat and spherical ceramic elements

Template tool (M13484 code)
